

Rebecca Miller - Delmar, NY - Northeast Region

Rebecca has always been surrounded by agriculture, whether at home or in the field. Conferring a bachelor's degree in Animal Science and Histotechnology, and using both to secure state licensure as a Veterinary Technician and Histotechnologist. When not working overnights at a large upstate NY hospital, Rebecca can be found on the family farm with her husband, Randy, and two rambunctious, young boys. She helps with medical management and breeding (and all the daily chores) on the 5th generation cow/ calf and seedstock operation, whose goal is to provide a consistently more efficient animal, making American Aberdeen's a natural choice.

Rebecca enjoys sharing her love of cattle with her children, with encouragement and support as they launch their own show careers, focusing on teamwork and consistency. Collaboration also spills over into the professional arena as Rebecca represents the Northeast Aberdeen Association (NEAA), as its' President, and enjoys working with many different breeders in her region. This role has also allowed her to reintroduce this region to the National Association and work with other regions for the betterment of the breed. Additionally, Rebecca is the NEAA committee representative for the International Committee which has been a challenging and exciting role, as the committee has forged new relationships and communication between other national registries.

Partnership and unity have been at the forefront of Rebecca's career, farm life, and professional aspirations. She hopes that these attributes continue to serve her well.
